

To whom it may concern:

As with our other telecommunication products, NEC Corporation of America continues to adhere to the FCC guideline.

NEC Corporation of America has implemented the safeguards needed to ensure the AP400 will only be used in the 1920-1930 MHz radio spectrum.

NEC Corporation of America will sell the AP400 IPDECT radio with a specific DAP Controller that will only enable the 1920-1930 MHz frequency.

The NEC DAP Controller is proprietary to NEC and is not available to any US end user except through NEC Corporation of America distribution.

In addition all the NEC Corporation of America documentation indicates these radios can only be configured for 1920-1930 MHz.

Please note the detail explanation in attachment PDF title North America configuration.

Sincerely,

Peter Bevilacqua
NEC Corporation of America
Regulatory Service & Quality Mgmt Director
